DESCRIPTION

The Tecnam P-Mentor is a modern two-seat, low-wing trainer conceived for the point at which basic flying meets serious instrument work. Its distinguishing trick is not raw speed: it is the attempt to put a student and instructor in one economical, CS-23/FAR-23-compliant piston aircraft from first handling exercises through IFR procedures, without making the cockpit feel like a stripped-down ab-initio machine. In a training world still dominated by durable high-wing classics, the P-Mentor is the Italian answer for operators who want glass-panel familiarity, fuel-injected efficiency and a more contemporary flight-deck workflow.

Tecnam built the P-Mentor around the needs of flight training organisations and private pilots who want a properly equipped two-seater rather than a lightly equipped weekend aeroplane. The programme had to prove that a low-wing aircraft with a sliding canopy, a 100 hp Rotax and fixed tricycle gear could meet demanding modern stall and low-speed requirements while supporting PBN, RNAV and autopilot-based IFR training. Its airframe and systems reflect that brief: it is deliberately more sophisticated than a basic trainer, but it stops short of pretending to be a four-seat cross-country machine.

Quick facts

What makes the P-Mentor different from an ordinary basic trainer?

The P-Mentor's point of difference is its systems syllabus. It is designed to introduce the pilot to an electronically managed, fuel-injected engine, a constant-speed propeller and an IFR-oriented Garmin suite while retaining the straightforward rhythm of a fixed-gear aeroplane. That makes it particularly relevant where an operator wants one platform for visual flying, navigation, instrument procedures and commercial-course preparation.

In the air, the configuration is purposeful rather than exotic. The tapered wing uses a laminar-flow aerofoil, a 75-percent-span slotted flap and Frise-type ailerons. Tecnam says the design satisfies the applicable low-speed and stall criteria without making a ballistic recovery system essential to the baseline configuration; a BRS installation is nevertheless approved as an option. The wide-span flap is a useful clue to the aircraft's character: this is a machine intended to reward disciplined energy management, not to excuse its absence.

The low-wing layout gives the pilot a different visual relationship with the runway than a high-wing trainer, and the canopy provides unusually open sightlines around the cabin. It is an engaging layout for handling exercises and circuit work, although it also means the P-Mentor asks a buyer to choose a training philosophy rather than simply buy the most familiar ramp furniture.

Powerplant, systems and technical highlights

- Rotax 912 iSc3 four-cylinder, four-stroke, liquid-/air-cooled opposed engine rated at 100 hp.
- Redundant electronic fuel injection and ignition, engine-management system, dry-sump lubrication and a reduction gearbox.
- MT two-blade hydraulically governed variable-pitch propeller, bringing propeller control into the training sequence.
- Tapered low wing with a mixed alloy-and-composite structure, integral fuel tank aft of the main spar and 140-litre fuel capacity.
- Steel truss structure around the cabin for occupant protection and energy absorption, with a light-alloy tailcone and GFRP side skins.
- Garmin IFR avionics architecture with GTN 650 Xi GPS/NAV/COM, GNC 255A NAV/COM, GTX 345R ADS-B transponder and GMA 245R remote audio panel in the standard package described by Tecnam.
- Connex wireless capability for flight-plan transfer with compatible Garmin portable devices and apps; GFC 500 autopilot equipment is offered as an option.

How it compares

Comparison rival: current Cessna Skyhawk. Published figures vary by model year, equipment, operating limitations and engine or propeller fitted; performance should always be checked against the applicable flight manual.

Honest ownership note: The P-Mentor is a specialised, modern trainer rather than a simple metal-and-magnetos utility aeroplane. A pre-purchase inspection should therefore concentrate on the Rotax 912 iSc3 installation and its electronic engine-management components, reduction gearbox and cooling system; the variable-pitch propeller and governor; the canopy, composite surfaces and bonded structures; corrosion protection around the alloy elements; and a full functional check of the Garmin installation, transponder, autopilot if fitted and any BRS equipment. Support from a Tecnam-experienced maintenance organisation, a Rotax-trained technician and an avionics shop familiar with the installed Garmin architecture is more valuable here than a generic annual inspection performed by someone meeting the type for the first time.

Exterior and cabin

Exterior

- Compact low-wing silhouette with a tapered wing and fixed tricycle undercarriage.
- Large sliding canopy rather than conventional cabin doors.
- Composite leading edge, smooth GFRP side skins and a distinctly modern training-aircraft profile.
- Integral wing fuel storage and a conventional tailplane arrangement.

Cabin and cockpit

- Two side-by-side seats with a central throttle lever and shaped control sticks.
- Broad canopy glazing and a panel designed around IFR Garmin equipment.
- Roomy baggage area immediately aft of the seats.
- Training-friendly cockpit logic for radio navigation, GPS procedures, engine monitoring and optional autopilot operation.

Who is this aircraft for?

- Flight schools seeking a single-engine platform for ab-initio, night, instrument and advanced single-engine training.
- Private pilots who usually fly alone or with one passenger and want modern IFR capability.
- Owners who value Rotax fuel efficiency and electronic engine management.
- Pilots who want variable-pitch propeller experience without stepping immediately into a larger complex aircraft.

The P-Mentor makes most sense when viewed as a compact instrument-training aeroplane that also happens to be pleasant for personal flying. It is not trying to out-haul a four-seat trainer or win a horsepower contest. Its appeal is more precise: efficient operation, an unusually modern training environment and enough systems depth to ensure that the pilot is still learning long after the first solo circuit is merely a memory.

SPECIFICATIONS

General Information

Model

Tecnam P-Mentor

Engine & Power Systems

Engine Type	Rotax 912 iSc3, 100 hp, four-cylinder, four-stroke liquid-/air-cooled fuel-injected engine
Propeller Type	MT two-blade hydraulically governed variable-pitch propeller

Avionics & Equipment

Avionics	Garmin GTN 650 Xi, GNC 255A, GTX 345R ADS-B transponder and GMA 245R remote audio panel; GFC 500 autopilot optional

HOW TO BID ON THIS LOT

Bidding is online at CollectAirs. Register and complete verification in good time before the lot closes, verification is reviewed by our team rather than granted instantly.

collectairs.com/auctions/tecnam-p-mentor

Questions about this aircraft, the paperwork or the process can be sent to our team at any hour on WhatsApp, or by email at info@collectairs.com.

OTHER LIVE AUCTIONS

Live when this document was prepared. Stages and availability change: check the site for the current position.

Ikarus Comco C42

Kirn, Germany

€65,000 CURRENT PRICE

Closes 8 October 2026, 19:00 UTC

Rare UTVA AERO 3

Büren, Germany

€20,000 CURRENT PRICE

Closes 8 October 2026, 19:00 UTC

IMPORTANT INFORMATION

Closing times can change

The closing time shown is indicative. Auctions may be extended automatically when bids arrive close to the deadline, and CollectAirs may reschedule, pause or withdraw a lot at any time. The time shown on the website governs.

Prices are indicative

Starting prices, current bids and any reserve are subject to change and may be corrected, revised or withdrawn. Where a lot carries a reserve, the amount is confidential and the lot will not sell below it. Figures here exclude applicable fees, taxes, duties, transport and registration costs.

No offer and no contract

This document is provided for information only. It is not an offer, a valuation, an appraisal, or an invitation to treat, and it forms no part of any contract. Bidding and sale are governed solely by the CollectAirs Terms and Conditions in force at the time of the auction.

Condition and airworthiness

Aircraft are sold as they stand. Descriptions, specifications, hours, dates and maintenance status are supplied by the seller and, while CollectAirs curates and verifies listings, they are not warranted as complete or accurate. Buyers are expected to carry out their own inspection, records review and pre-purchase survey before bidding.

Export, registration and compliance

Deregistration, export, import, customs, tax and re-registration are the buyer's responsibility, as is confirming that the aircraft can be lawfully imported and operated in the intended jurisdiction. Requirements vary by country and can affect both cost and timescale.

Photography and written content

Photographs are supplied by the seller and may have been edited for exposure, colour, straightening or the removal of background distractions, in some cases with AI-assisted tools. Parts of the written description and specification summaries may also have been drafted or edited with AI assistance for clarity and consistency. Such enhancements are made to present the aircraft clearly and are not intended to conceal, add or alter any physical feature, damage or defect. Photographs are illustrative, treat the aircraft itself, and its records, as the only authority on condition.

Seller identity

Seller names are shown in the partially masked form used across the platform. Full counterparty details are exchanged through CollectAirs once an auction concludes.
